The Korean Way of TeaPoliticians invoke grand ideas: social justice, democracy, liberty, equality, community. But what do these ideas really mean? How can politicians across the political spectrum appeal to the same values? This new edition of Adam Swift’s highly readable introduction to political philosophy answers these important questions, and includes new material on global justice, feminism, and method in political theory, as well as updated guides to further reading. This lively and accessible book is ideal for students, but it also brings the insights of the world’s leading political philosophers to a wide general audience. Using plenty of examples, it equips readers to think for themselves about the ideas that shape political life. Democracy works best when both politicians and voters move beyond rhetoric to think clearly and carefully about the political principles that should govern their society. But clear thinking is difficult in an age when established orthodoxies have fallen by the wayside. Bringing political philosophy out of the ivory tower and within the reach of all, this book provides us with tools to cut through the complexities of modern politics. In so doing, it makes a valuable contribution to the democratic process and this new edition will continue to be essential reading for students of political philosophy and theory.

The Introductory Guide to Art Therapy The first edition of this book was based upon the recommendations of the Quality Assurance in the Treatment of Drug Dependence Project, and provided a step-by-step guide for therapists working with clients with alcohol or other drug dependency or misuse. Since publication in 1995 it has become well known for its easy-to-read style and wealth of practical resource materials. The Practical Geologist Intersectional Theology: An Introductory Guide offers a pathway for reflective Christians, pastors, and theologians to apply the concepts and questions of intersectionality to theology. Intersectionality is a tool for analysis, developed primarily by black feminists, to examine the causes and consequences of converging social identities (gender, race, class, sexual identity, age, ability, nation, religion) within interlocking systems of power and privilege (sexism, racism, classism, heterosexism, ableism, ageism, nativism) and to foster engaged, activist work toward social justice. Applied to theology, intersectionality demands attention to the Christian thinker’s own identities and location within systems of power and the value of deep consideration of complementary, competing, and even conflicting points of view that arise from the experiences and understandings of diverse people. This book provides an overview of theories of intersectionality and suggests questions of intersectionality for theology, challenging readers to imagine an intersectional church, a practice of welcome and inclusion rooted in an ecclesiology that embraces difference and centers social justice. Rather than providing a developed systematic theology, Intersectional Theology encourages readers to apply its method in their own theologizing to expand their own thinking and add their experiences to a larger theology that moves us all toward the kin-dom of God.

Everyday Evaluation on the Run Jacques Derrida, the French philosopher, developed his critical technique known as ‘deconstruction’. His work is associated with ideas surrounding both post-structuralism and post-modern philosophy, and he was known to have challenged some of the unquestioned assumptions of our philosophical tradition. In this Very Short Introduction, Simon Glendinning explores both the difficulty and significance of the work of Derrida. He presents Derrida’s challenging ideas as making a significant contribution to, and providing a powerful reading of, our philosophical heritage. Defending Derrida against many of the charges that were pressed against him, he attempts to show why Derrida’s work causes such extreme reactions. Glendinning explains Derrida’s distinctive mode of engagement with our philosophical tradition, and shows that this is not a merely negative thing. By exploring his most famous and influential texts, Glendinning shows how and why Derrida’s work of deconstruction is inspired by a ‘critical frenzy’, but by a loving respect for philosophy. Patch Clamping University Teaching: An Introductory Guide is a vital tool for the new lecturer that aims to encourage and support an inquiry into university teaching and academic life. This book understands that teaching is not discrete but one of many activities integrated in academic work. It recognizes that teaching is directly affected by administrative concerns such as timetabling and workload demands, departmental culture, disciplinary research expectations and how we think about the purposes and values of higher education. The new lecturer must learn to adapt to and shape the circumstances of their academic work. Understanding that teaching is an integral part of this work rather than a dislocated discipline, can help us think about practice in new ways. Harland argues
against the teaching-research divide and popular opinion that ‘teaching takes time away from research’. He proffers the sentiment that all aspects of academic practice need to be considered when inquiring into learning how to teach, and that teaching is better understood when it is firmly embedded and integrated in this work. Writing from his experience extracted from a ten-year research project working with early career staff, he addresses popular concerns of academics, including: Lecturing Peer review of teaching Discussion as an approach to teaching Research and the new academic The subject and the idea of critical thinking This clearly written and practical book will be ideal for all new lecturers in higher education, and also more seasoned academics wishing to progress their professional development. Tony Harland is Associate Professor at the Higher Education Development Centre, University of Otago, New Zealand

Spirituality, Health, and Wholeness An understanding of statistics and experimental design is essential for life science studies, but many students lack a mathematical background and some even dread taking an introductory statistics course. Using a refreshingly clear and encouraging reader-friendly approach, this book helps students understand how to choose, carry out, interpret and report the results of complex statistical analyses, critically evaluate the design of experiments and proceed to more advanced material. Taking a straightforward conceptual approach, it is specifically designed to foster understanding, demystify difficult concepts and encourage the unsure. Even complex topics are explained clearly, using a pictorial approach with a minimum of formulae and terminology. Examples of tests included throughout are kept simple by using small data sets. In addition, end-of-chapter exercises, new to this edition, allow self-testing. Historiography: An Introductory Guide

An Introductory Guide to Reflexology "What is historiography?" asked the American historian Carl Becker in 1938. Professional historians continue to argue over the meaning of the term. This book
challenges the view of historiography as an esoteric subject by presenting an accessible and concise overview of the history of historical writing from the Renaissance to the present. Historiography plays an integral role in aiding undergraduate students to better understand the nature and purpose of historical analysis more generally by examining the many conflicting ways that historians have defined and approached history. By demonstrating how these historians have differed in both their interpretations of specific historical events and their definitions of history itself, this book conveys to students the interpretive character of history as a discipline and the way that the historian's context and subjective perspective influence his or her understanding of the past.

Navigating the Postqualitative, New Materialist and Critical Posthumanist Terrain Across Disciplines Navigating the Postqualitative, New Materialist and Critical Posthumanist Terrain Across Disciplines is an accessible introductory guide to theories, paradigm shifts and key concepts in postqualitative, new materialist and critical posthumanist research. Supported by its own website, this first book in a larger series is an essential companion to the primary texts and original sources of the theorists discussed in this and other books in the series. Disrupting the theory/practice divide, the book offers a postqualitative reimagining of traditional research processes. In doing so, it guides readers through the contestation of binaries, innovative concepts, and the practical provocations that make up the postqualitative terrain. It orients the researcher in the ontological re-turn also by considering Indigenous knowledges, African, Eastern and young children’s philosophies. The style itself is postqualitative through directive engagements by the authors and the website includes some examples of the practical provocations described in the book that give an imaginary of how postqualitative research can be taught and enacted. This book is an essential resource for novice as well as experienced researchers working both within and across disciplines in higher education.
